

Samuel Maselli

(929) 394-7539 | SamuelLMaselli@gmail.com | GitHub: ItsSammyM

A passionate programmer since 2019, looking for a full-time software engineering position utilizing his skills in full-stack engineering, web design, game design, mathematics, AI, education, robotics, or hardware integration.

Skills

Programming Languages: Rust, Java, Python, C, C#, C++, Javascript, Typescript, JSX, HTML, JSON, CSS

Technologies: React, Angular, OOP, Websockets, HTTPS, Rest APIs, Monogame, Unity, Unreal, Machine Learning, Docker, Arduino, Git, GitHub, Github Copilot, Claude, Cloudflare, Cloud computing, ArcGis Pro

Education

Rochester Institute of Technology, Rochester, NY

Expected Graduation December 2025

Bachelor of Science, Computational Mathematics

GPA: 3.37, Deans List

Computer Science: Artificial Intelligence, Mechanics of Programming, CS Theory, Analysis of Algorithms

Math: Multivariable Calculus, Discrete Math, Differential Equations, Linear Algebra, Probability and Statistics

Work and Team Experience

Midnight Machinations, Founder & Chief Developer

November 2019 - Present

A web-based social deduction video game with 85 in-game characters using asynchronous rust, secure websockets, running on a virtual private server (VPS), and containing over 43,000 lines of code. With a playerbase of 200 players that participate in game nights several times a week. Games typically have 6 - 20 simultaneous players.

<https://github.com/midnight-machinations/midnight-machinations>

- Orchestrated a small team of devs to implement features and bug fixes through GitHub Issues and meetings
- Utilized pull request reviews for quality assurance, ensuring code is reliable, and follows design principles
- Designed and built a dockerized CI/CD pipeline using GitHub actions and CloudFlare pages to deploy nightly
- Automated scenario tests using Rust's testing framework to maintain game functionality and integrity
- Ran playtests and solicited player feedback to find and fix bugs, and streamline UI design
- Fully internationalized front-end website built using Python and React with over 50 react components

Hyperproof, Software Development Engineer Intern

May 2023 - August 2023

A remote-first software company that provides automated enterprise compliance management software.

- Worked on the integrations team containing 15 developers participating in twice-weekly standup meetings
- Pair programmed with team members to efficiently build new features, debug production issues and fix bugs
- Pulled data via API from Azure Active Directory, AWS, GitHub Enterprise into internal object formats
- Coded Declarative JSONata objects to transfer data from APIs to PDF files for hyperproof output documents
- Improved supportability by adding comprehensive state management logging using TypeScript and Python

First Tech Challenge, Team Captain and Head Programmer

September 2019 - June 2022

An international robotics engineering and programming competition where high school students build robots to autonomously solve tasks such as building towers out of lego bricks or putting objects on shelves.

- Head programmer for 3 teams of 10 students each creating both autonomous code and player controller code
- Programmed servos, motors, IMU's, cameras, remote controllers, in addition to color and distance sensors
- Designed an Euler Integration system to keep track of the robot position based on IMU data
- Utilized image processing contour detection libraries to allow the camera to scan for objects to grab
- Educated robotics team members and middle-school students on math, computer science, and engineering

Side Projects

Circuit Scripting Language <https://github.com/ItsSammyM/circuit-lang>

March 2026 - Present

<https://github.com/ItsSammyM/circuit-lang-editor>

- Graphical scripting language using logic gates for use in education and video games written with Rust.
- Claude Code and other AI tools assisted in language optimizations and creation of the editor

AI Snake Game https://github.com/ItsSammyM/basic_ai_snake

January 2025 - February 2025

- Rust based genetic machine learning neural network AI to play "snake". Achieved 60% grid completion rate

Chess Battle Royale <https://github.com/ItsSammyM/ChessBattleRoyale>

June 2021 - August 2021

- C# based multiplayer chess for up to 256 players using Monogame Framework, Websockets, and OOP

Satisfiability (SAT) solver <https://github.com/ItsSammyM/poropsitional-logic-calculator>

October 2024 - May 2025

- Solver for boolean expressions in the command-line to explore NP-Complete algorithmic complexity
